LLMFIT - Helps identify LLM models that fit your hardware and use cases
Quick Start:
Mac: Install via curl -fsSL https://llmfit.axjns.dev/install.sh | sh, then add the install path to your PATH with echo 'export PATH="$HOME/.local/bin:$PATH"' >> ~/.zshrc && source ~/.zshrc. Run llmfit to launch the interactive TUI, or llmfit fit --perfect to see only models your hardware can run well.

Windows: Install via cargo install llmfit (requires Rust) or grab the binary from the GitHub releases page. Run llmfit in your terminal for the interactive view, or llmfit fit --perfect -n 5 for a quick top-5 list. Make sure nvidia-smi is installed for accurate GPU detection.

Key commands (both platforms): llmfit system to see detected hardware, llmfit search "model name" to look up a specific model, llmfit recommend --json for machine-readable output.

Tools:
https://x.com/ollama/status/2027128222442532961?s=46 - Ollama light weight harness
https://x.com/itsandrewgao/status/2027579200635605058?s=46 - UI References for AI
